

ILLUMA SQUARE

INSTRUCTION MANUAL

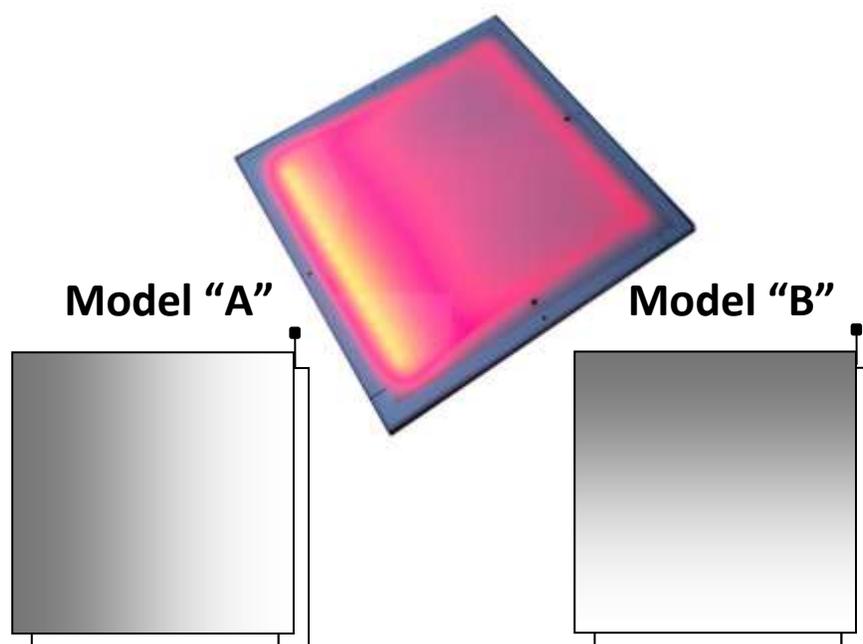

Made in the U.S.A. by USA Dance Floor

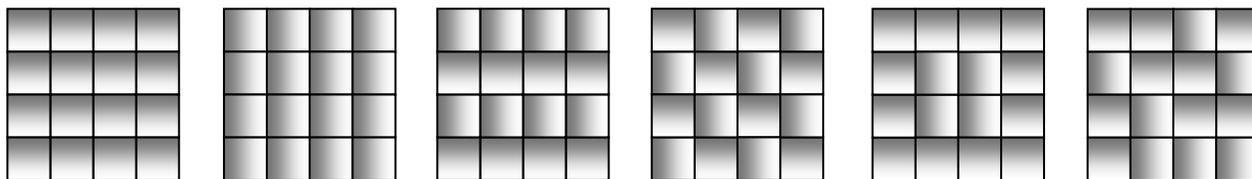

BEFORE YOU BEGIN

Plan ahead! First read all of this manual and get familiar with all of the parts. Failing to do so may void any warranties. The following pages explain every part and their function. While **ILLUMA SQUARE** is a simple design, you will save yourself a lot of headache if you first take the time to fully understand your system.

You may have; **Model A** and **Model B** floor panels. Pre-plan your layout and where you want the different panels. Programming channels, it is done during the assembling. Those steps are explained in this manual under PROGRAMING CHANNELS. Any panel may be programed to Channel 1, 2, 3 or 4.

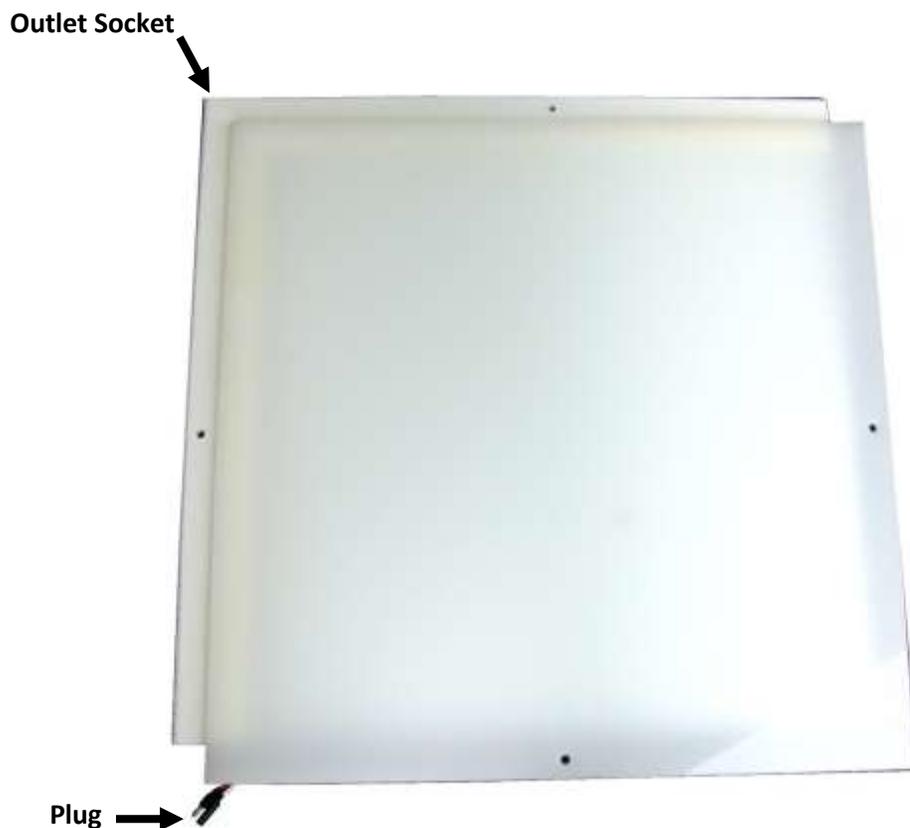

Model "A" has its illuminating edge as shown above. Model "B" has its illuminating edge perpendicular to model "A" as shown above. Use one model or mix them up to create patterns and effects as shown below. Additional panels are available separately in either model.

THE PARTS

The following pages explain each part to your system and their functions. Take a moment to understand every part. Once you understand all the parts, assembly will be fun, quick and easy.

2'X2' Floor Panel:

The **Floor Panel** is the 24 inch by 24 inch illuminating acrylic floor surface. Each panel has a plug for connecting to power on one edge and an outlet socket on the opposite edge.

The plug (with red and white wires) plugs into the outlet socket on the edge of a **Power Trim** piece or into a joining **Floor Panel**.

Main Power Trim:

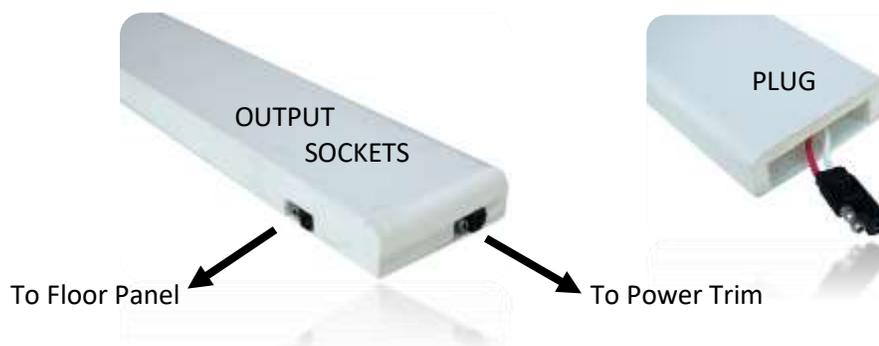

This is the trim piece with a cord that connects to the 4 pin DIN connector of the **Power Supply**. Only one is required per floor system. The outlet socket on the trim is where a **Power Trim** piece connects. You should never connect a **Floor Panel** to this part.
(NOTE: It will not harm anything if you get this wrong)

Power Trim:

These are the trim pieces with a plug on one end and two outlet sockets on the other end. The end with the plug connects directly to the outlet socket of the **Main Power Trim**. It may also be connected to the outlet socket of another **Power Trim** piece.

Note that there are two outlet sockets on the **Power Trim**. The socket on the end (opposite of the end with a plug) is for adding another **Power Trim** piece. The other socket located on the side edge of the trim is where a **Floor Panel** connects. *(NOTE: It will not harm anything if you get this wrong)*

Non-Power Trim:

This is the trim with no electrical connections. It is used to finish the outside open edge of your floor and attaches the optional aluminum **Beveled Edging**.

Beveled Edging: (Optional)

This is the aluminum edging that gives your floor a finished look and eliminates the trip hazard. The **Beveled Edging** is secured to the floors with a stainless-steel screw.

Outside Beveled Corner: (Optional)

The **Outside Beveled Corners** are automatically held in place under the **Beveled Edging**. One corner has a slot for the main power cable to exit. (**NOTE: Optional Inside Beveled Corner Sets are available**)

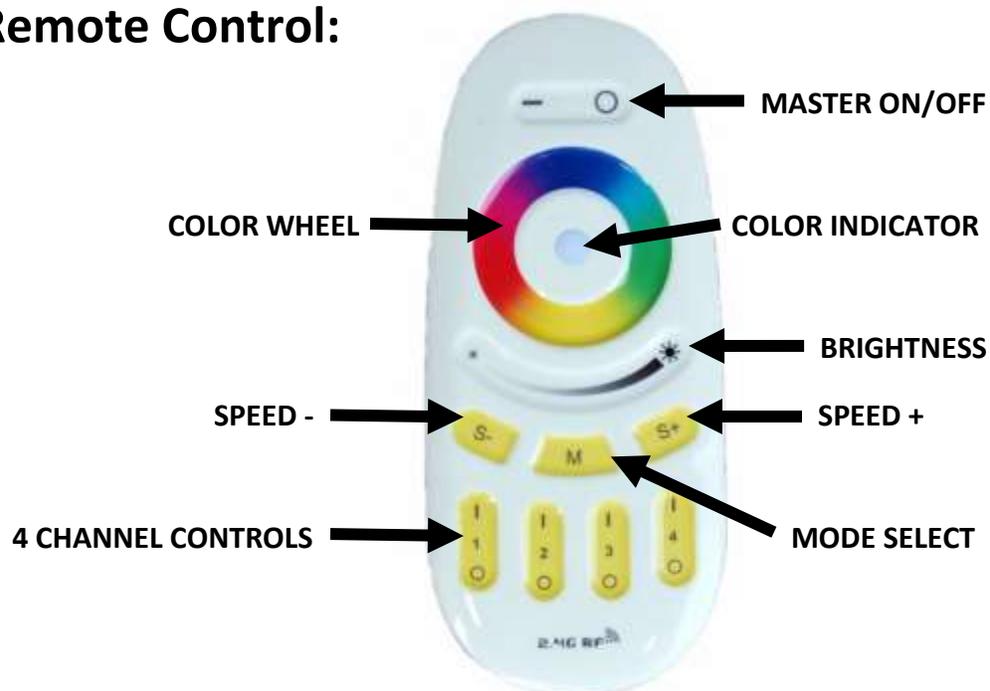

Power Supply:

INPUT: 100-240VAC 50/60Hz 2.5-1.3A
 OUTPUT: 12VDC 15A, 180W Max.
 49 Floor Panels Max.@ 3.7W Per Panel

The **Power Supply** supplies all of the safe low voltage to energize your system. (**NOTE: 49 Floor Panels Maximum**) It simply plugs into any standard wall socket and connects to the **Main Power Trim** piece with a 4 pin DIN connector.

Remote Control:

Each function is explained in detail on the next page.

Remote Control Functions

MASTER ON / OFF

This is the full ON or OFF control to all 4 channels. The on button also activates the, “Sync All Channels”, mode. Holding down the “ON” button for 3 seconds will activate the full white mode to all channels.

COLOR WHEEL

Instantly select any color for all channels by touching the wheel in any mode. Rotate your finger around the wheel to fine tune your desired color.

BRIGHTNESS

Touch and slide your finger to the right to increase brightness or to the left to decrease brightness.

SPEED + / -

Pressing or holding the (S+) button will increase the tempo of the active mode pattern and pressing the (S-) button will decrease it.

MODE

This button initiates the Mode function and scrolls through the modes in rotating order. Modes feature different color combinations, light transitions and patterns with 9 distinct modes. See the Mode Chart on the next page for detailed mode descriptions.

CHANNEL CONTROL

There are 4 separate ON/OFF buttons for selecting control and the setting of a single channel. Pressing one of the channels “ON” buttons activates that channel so commands will only affect that selected channel. Holding down the “ON” button for 3 seconds of any channel will turn that channel to full white. The “OFF” button of any channel will blackout that channel.

NOTE: *When your system is first plugged into power, the system resumes the modes and settings previously selected when last powered down.*

REMOTE CONTROL MODE CHART

MODE	FUNCTION	BRIGHTNESS	SPEED	DISCRIPTION
1	RGBW	Adjustable	Fixed	Red, Green, Blue, White fade in and out in a set cycle.
2	Seven Color Flash	Adjustable	Adjustable	Flash Red, Green, Blue, Yellow, Magenta, Cyan and White.
3	Disco	Adjustable	Adjustable	Red, Green, Blue, White, Purple and Yellow cycle in rotation with random transitions.
4	Red Fade In and Flash	Adjustable	Adjustable	Red brightens to full brightness, then flashes 3 times.
5	Green Fade In and Flash	Adjustable	Adjustable	Green brightens to full brightness, then flashes 3 times.
6	Blue Fade In and Flash	Adjustable	Adjustable	Blue brightens to full brightness, then flashes 3 times.
7	Multi-Color Mix	Adjustable	Adjustable	Multiple colors fade and flash randomly and actually cycle thru all 9 modes starting with Mode 8.
8	Six Color Fade	Adjustable	Adjustable	Red, Green, Blue, Yellow, Magenta and Cyan fade in and out.
9	White Only Fade	Adjustable	Adjustable	White continuously fading in and out.

REMOTE CONTROL TECHNICAL INFORMATION:

- Requires two AAA batteries.
- 2.4GHz Wi-Fi Compatible control.
- RF touch remote control.
- This device complies with part 15 of the FCC Rules.

PROGRAMING CHANNELS

All floor panels originally come from the factory unprogrammed to any one of the four channels and the panels will not respond to the handheld remote. To make the floor panel respond to the handheld remote control, make the following steps.

Install two fresh AAA batteries into the handheld **Remote Control**. While using the remote during assembly, you will have an opportunity to assign channels as each **Floor Panel** is connected to power.

As the floor system is assembled, the **Power Supply** must be plugged into power, powered on and connected to the floor trim. The moment you connect a **Floor Panel** to power you will have 3 seconds to press one of the four channels' "ON" buttons of the handheld **Remote Control**. The four buttons are pointed out below.

NOTE: If the floor panel is new, or does not respond to the remote control, skip steps 1 thru 3.

STEP 1:

Changing or reprogramming to a new channel will always require that the **Floor Panel** is first unprogrammed from the channel it is currently assigned. To establish what channel the panel is currently assigned, simply press the on and off button of each channel until the panel responds.

STEP 2:

Disconnect the **Floor Panel** from power and then reconnect. Within 3 seconds press and hold the "ON" button of the currently assigned channel.

STEP 3:

If successful, **ILLUMA SQUARE** will flash white 9 times quickly. If not, repeat steps 1 and 2.

STEP 4:

Disconnect the panel from power.

STEP 5:

Reconnect to power and within 3 seconds, press once (do not hold) the "ON" button of the channel you want the panel to be assigned to.

STEP 6:

If successful, **ILLUMA SQUARE** will flash white slowly 2 times. If not, repeat steps 4 and 5.

ASSEMBLY INSTRUCTIONS

All parts are secured together by one-inch, #2 Standard Phillips Head stainless-steel screws. All screws should only be **“started”** and kept loose during assembly as shown in **Figure A**. Keeping the screws loose will keep the **Floor Panels** free to move during assembly.

Only after all the screws have been started the screws may be **Secured**.

Securing a screw does not mean tighten it. Securing a screw means that the top of the screw’s head is level with or below the floor surface as shown in **Figure B**.

Figure A

The cutaway drawing on the right shows the screw in the **“started”** position.

Dance Floor surface

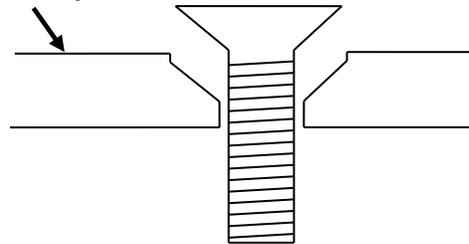

Figure B

This drawing shows the screw in the **“secured”** position. Notice there is room to allow for flexing and movement.

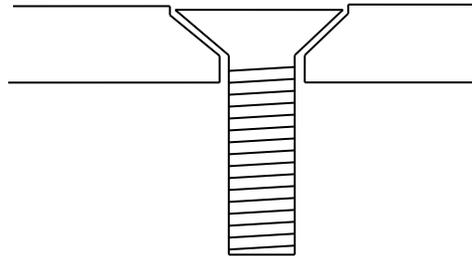

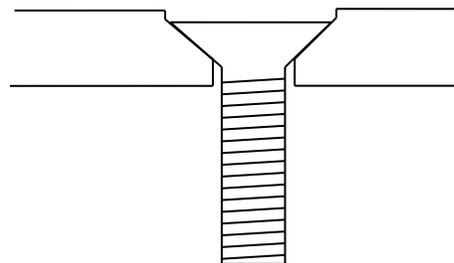

Figure C

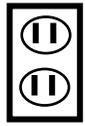

This drawing shows the screw **too tight**. This will void any warranty.

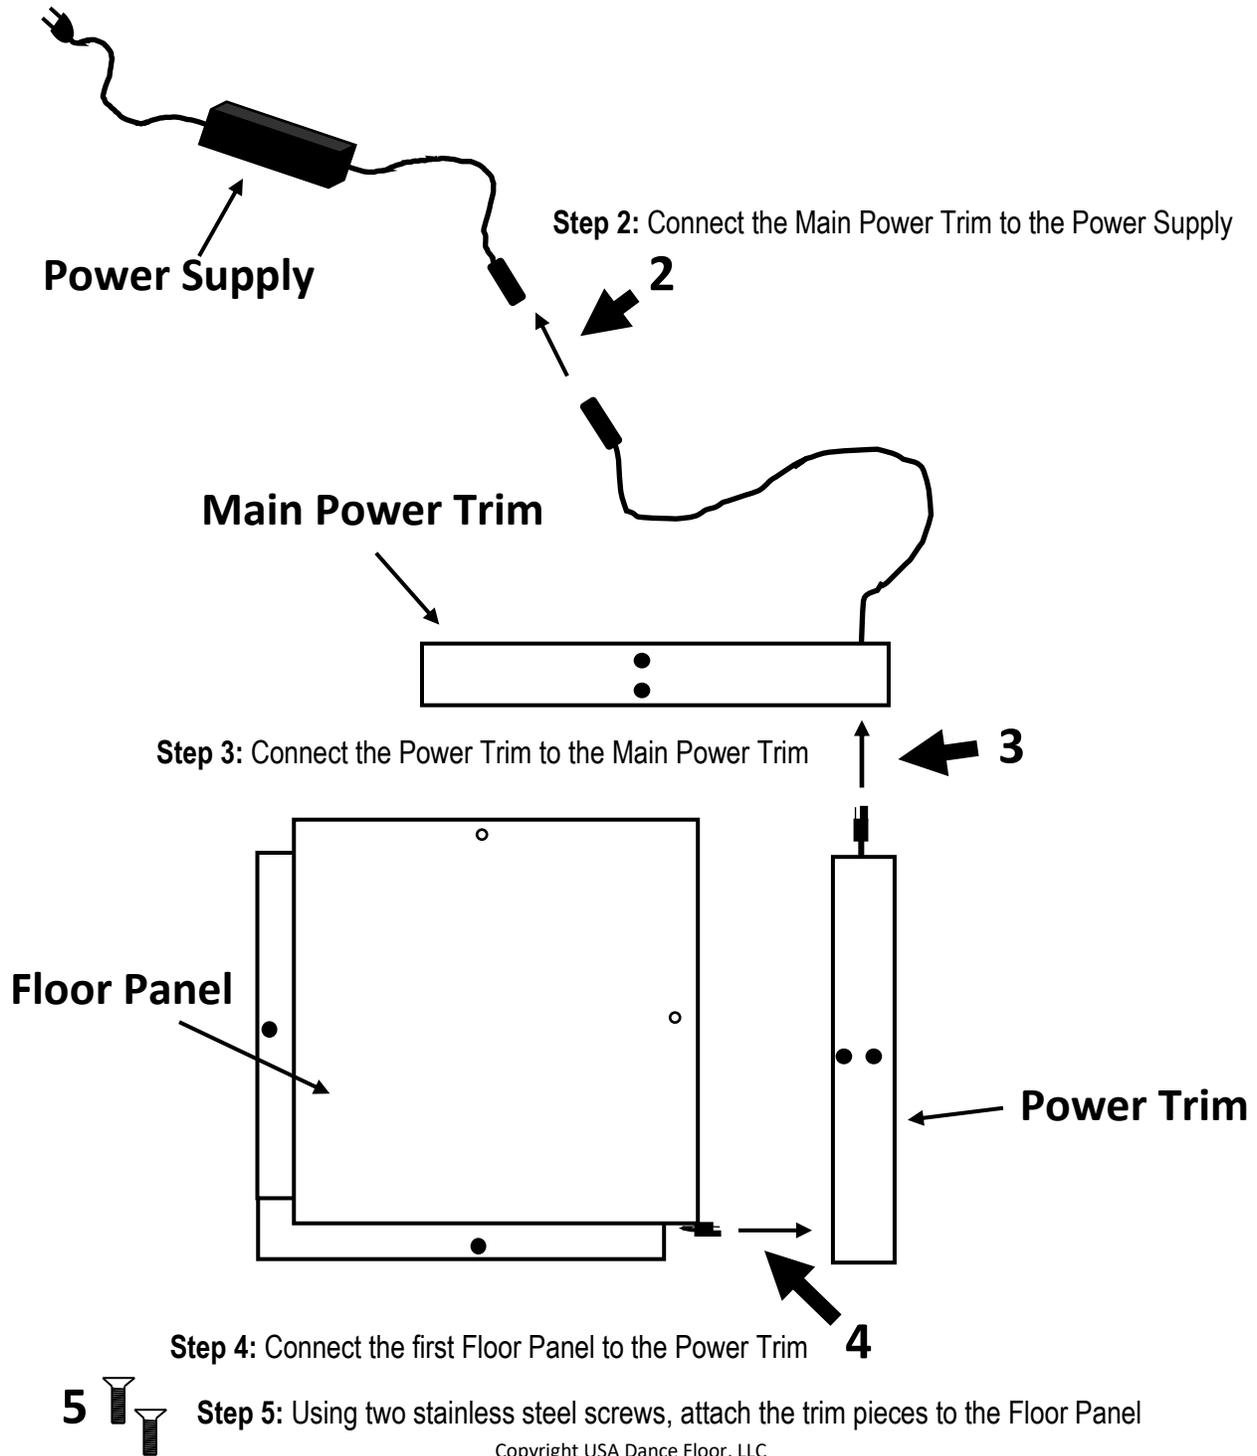

NOTE: A power drill may be used to secure screws only if it has a ratchet drive set at low torque.

STEP BY STEP ASSEMBLY:

Steps 1 thru 5 will get your first floor panel connected and functional. If you plan to change the programmed channel, it should be done during step 4.

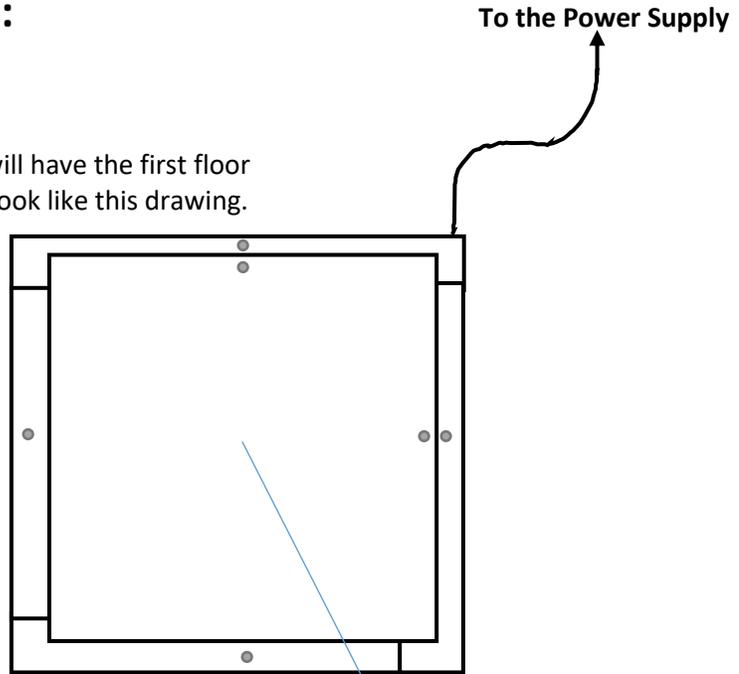

1 Step 1: Plug the Power Supply into a standard wall outlet

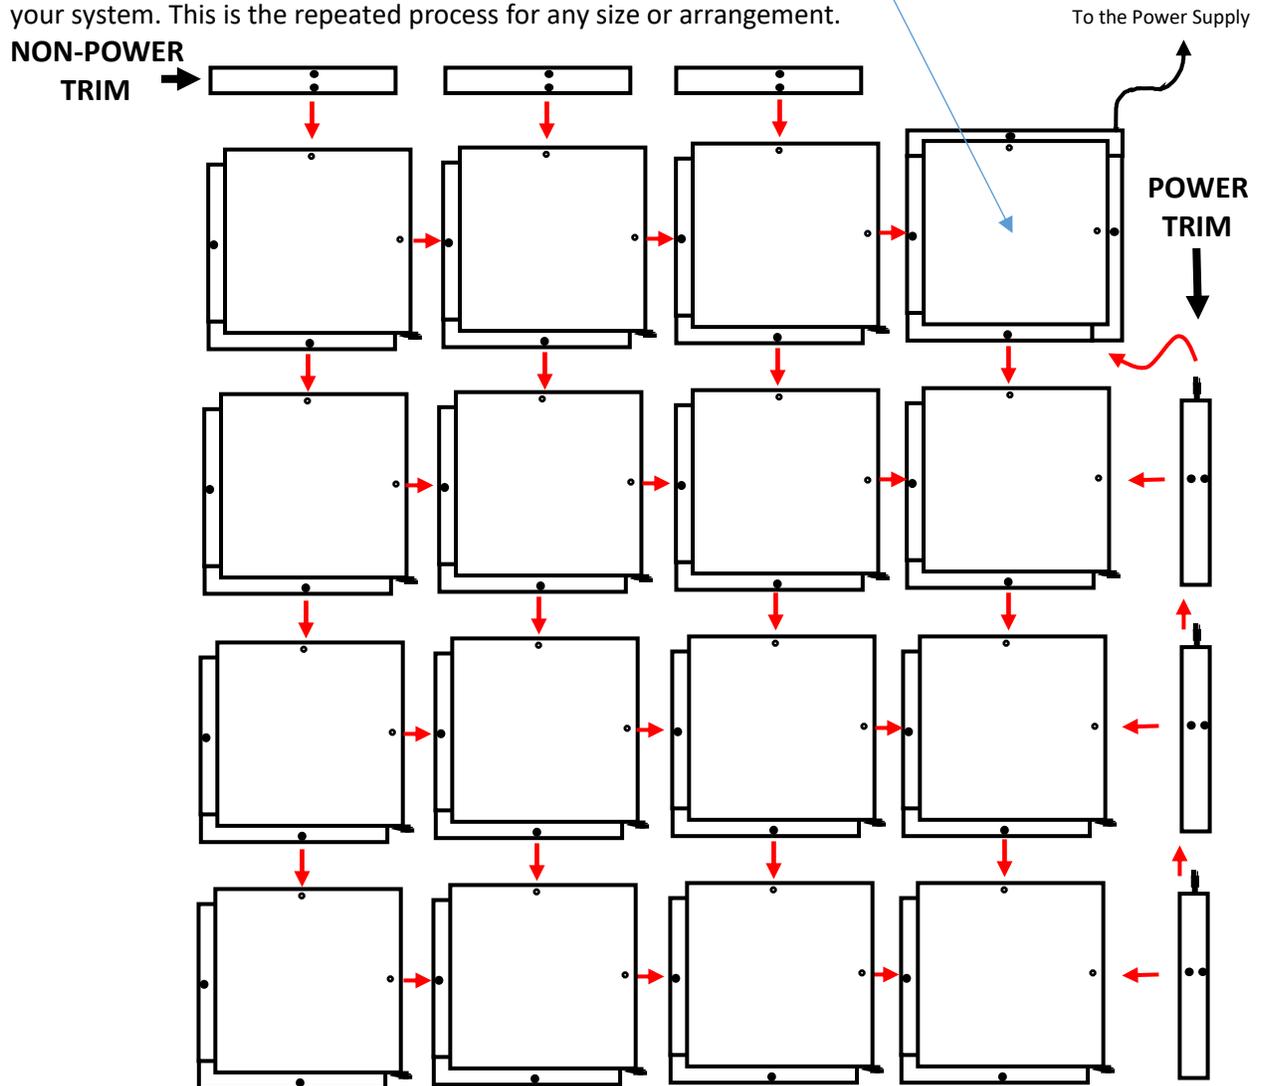

ASSEMBLY ORIENTATION:

After completing the first five steps you will have the first floor panel installed and functioning. It should look like this drawing.

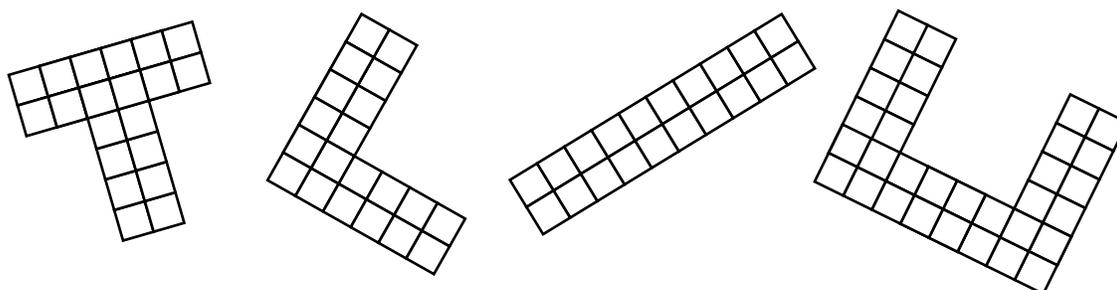

The drawing below shows the first panel (in the upper right-hand) and it shows how to assemble the rest of your system. This is the repeated process for any size or arrangement.

FINAL STEP & NOTES

ARRAIGNMENTS:

Remember you can arrange your floor to form a square, rectangle, or runway. Pictured below are only a few ideas.

FINISHING STEP:

Once all the Floor Panels are connected and the screws have been “Started”, it is time to secure all of the screws and attach the optional aluminum beveled edging. Remember; securing a screw means that the top of the screw’s head is level with or below the floor surface. Do not tighten screws as explained under, “ASSEMBLY INSTRUCTIONS” on page 10 of this manual.

NOTE: A power drill may be used to secure screws only if it has a ratchet drive set at low torque

You should be ready to go. Have fun!

NOTE: If you have the optional Beveled Edging and you are arranging a floor with inside corners, such as an “L” or “T” shape, beveled inside corner sets are available at www.illumasquare.com

CLEANING & MAINTENANCE:

ILLUMA SQUARE is recommended for inside use only. You may setup ILLUMA SQUARE on any flat hard surface.

Floor panels are water resistant but not waterproof. You may spill drinks and wet mop. All that is needed to clean the acrylic surface is water and a clean rag. Never use anything abrasive.

Whatever does not come off with water can be easily removed with “Goof Off” remover and a clean rag.

We have tested many cleaners and recommend “Goof Off” brand professional strength remover (in the yellow can). It can be used to clean any parts of the floor panels and trim. Simply wet a clean rag with Goof Off and wipe.
